

Commercial Services

F & M Bennett & Son has extensive experience in providing commercial removal and relocation service nationwide. Whether you are a small or large organisation, you can rely on F & M Bennett & Son to provide expert and helpful guidance and services. Our removal packages are designed to minimise the disruption to your business and tailored to fit the requirements of your company. As part of our commercial services we offer a range of secure storage services including archive, which can be utilised for as long as required.

Whether your business is moving locally, nationally or internally you can rely on Bennetts to provide a first class service from initial enquiry to completion.

F & M Bennett & Son will arrange a free site survey to assess your requirements. We will then send a no-obligation quotation. During the site survey we will assess how many crates, computer crates and packing materials will be required. We will arrange delivery and collection of crates on days to suit you.

Where access is tight our staff can dismantle office furniture so that it will fit through doorways. This will be re-assembled at the new location. All the furniture will be set up according to your floor plans and specifications. On completion of your move the foreman will walk through the building with you to ensure that everything is in the right place.

F & M Bennett & Son will protect common areas to ensure no damage to buildings. Corex is used to protect inside of lifts and hardboard to protect polished floors and marble. Hardboard is also used on uneven surfaces so that equipment can be moved on skates and trolleys.

In order to ensure minimum downtime for your company Bennetts can move your office after hours or at weekends if required.

F & M Bennett & Son hold an Environmental tipping licence and can dispose of any unwanted furniture and equipment. We also have the ability to dispose of confidential waste and to arrange wiping and destruction of computer equipment.
